Day 41

DIY

Q1. Problem Statement: K Nearest Neighbor (KNN) Algorithm

You are given a dataset – *"diabetes.csv."* Load the dataset into a DataFrame. Now, Considering the *"Outcome"* column as the target variable, perform the following tasks:

1. Declare feature vectors and the target variable
2. Split the data into test and train fragments using `train_test_split()` function in 80:20 ratio (80% train, 20% test)
3. Generate a line plot to show accuracies for different numbers of neighbors
4. Identify the maximum accuracy from the plot and Calculate model accuracy with the nearest neighbors, which could fetch maximum accuracy
5. For the neighbors which show maximum accuracy, plot a ROC (Reciever Operating Characteristic) curve

Dataset:

	Pregnancies	Glucose	BloodPressure	SkinThickness	Insulin	BMI	DiabetesPedigreeFunction	Age	Outcome
0	6	148	72	35	0	33.6	0.627	50	1
1	1	85	66	29	0	26.6	0.351	31	0
2	8	183	64	0	0	23.3	0.672	32	1
3	1	89	66	23	94	28.1	0.167	21	0
4	0	137	40	35	168	43.1	2.288	33	1

Sample Output:

1. Declare feature vectors and the target variable

```
array([[  6.   , 148.   ,  72.   , ...,  33.6  ,   0.627,  50.   ],
       [  1.   ,  85.   ,  66.   , ...,  26.6  ,   0.351,  31.   ],
       [  8.   , 183.   ,  64.   , ...,  23.3  ,   0.672,  32.   ],
       ...,
       [  5.   , 121.   ,  72.   , ...,  26.2  ,   0.245,  30.   ],
       [  1.   , 126.   ,  60.   , ...,  30.1  ,   0.349,  47.   ],
       [  1.   ,  93.   ,  70.   , ...,  30.4  ,   0.315,  23.   ]])
```

```

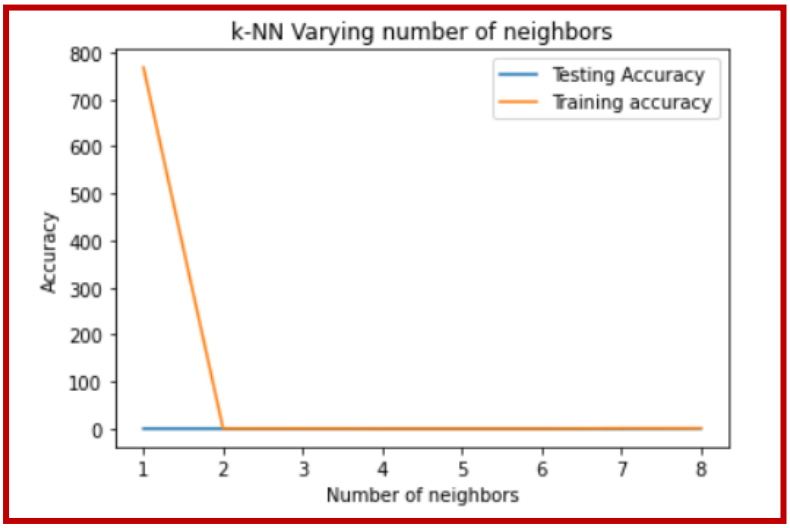
2. Split the data into test and train fragments using `train_test_split()` function in 80:20 ratio (80% train, 20% test)

```
After splitting the data-
size of input train data is: 39416
sizeof input test data is: 9976
size of output train data is: 5016
size of output test data is: 1336
```

3. Generate a line plot to show accuracies for different numbers of neighbor



4. Identify the maximum accuracy from the plot and Calculate model accuracy with the nearest neighbors, which could fetch maximum accuracy

```
Accuracy score for 2 neighbours-
Accuracy Score:  0.7142857142857143
```

```
Accuracy score for 3 neighbours-
Accuracy Score:  0.6948051948051948
```

5. For the neighbors which show maximum accuracy, plot a ROC (Reciever Operating Characteristic) curve
