Day 82

Project Implementation

The Capstone Project presented on Day 81 will be discussed in this session. This phase is crucial as it transitions the project from planning and conceptualization into actionable execution. The primary objective of this session is to ensure that every aspect of the project is clearly understood and meticulously planned for effective implementation.

This is a guide for the learners, outlining the necessary steps for successful execution of the project. It details the goals, research requirements, planning strategies, execution processes, continuous review mechanisms, and final submission procedures. Following this structured approach, learners can ensure that the project meets all specified objectives and quality standards.

Project Objective

- **Define Goals:** Understand the project's objectives and requirements.

- **Research and Apply Acquired Knowledge:** Read and go through the technical documentation and articles to gain an understanding of the concepts that are needed to implement the required functionalities.

- **Plan and Execute:** Create a proper project plan and initiate the implementation process by installing the necessary tools and products.

- **Review and Improve:** Continuously review and analyze functionalities to ensure they work smoothly.

- **Submit:** Ensure that your project is fully functional before submitting it for evaluation.
